National
Emphasis
Program (NEP)

"Recognized And Generally Accepted Good Engineering Practice" (RAGAGEP), are engineering, operation, or maintenance activities based on established codes, standards, published technical reports or recommended practices or a similar document which detail generally approved ways to perform specific engineering, inspection or mechanical integrity activities.

Ammonia Refrigeration Compliance Analysis

www.kensington-consulting.com

Federal, state and local regulatory requirements are increasing steadily in both number and complexity. Knowing what regulations apply and how to comply with these requirements is a major concern for your business. Building and managing a safe workplace, protecting the environment and complying with a maze of regulations can seem overwhelming. With detailed, up-to-date understanding of RAGAGEP's applicable to the ammonia refrigeration industry we provide the compliance expertise you need to develop a robust gap analysis and compliance plan.
