OSHA PSM — EPA RMP Compliance Audits

OSHA Process Safety Management (PSM) and EPA Risk Management Program (RMP) require employers certify they have evaluated compliance with PSM/RMP provisions at least every three years. Kensington and Reliability frequently collaborate to assist chemical processing or handling, pharmaceutical or biotechnology manufacturing, or industrial ammonia refrigeration facility clients in verifying that their procedures and practices developed under PSM and RMP are adequate and are being followed. Kensington and Reliability's extensive experience in assessing implementation of the historically most OSHA cited PSM elements is essential to producing high quality and informative program audits.
